

Health Center COVID-19 Testing Supply Distribution Program

Order Form

Deadline to submit order is Wednesday, April 21, 2021

Overview

HHS, HRSA and the Department of Defense (DOD) have partnered to provide rapid COVID-19 point of care (POC) tests and analyzers ("rapid POC systems") to HRSA Health Center Program awardees and Health Center Program look-alikes ("health centers"). A single system consists of a hand-held analyzer (equipment that reads the results) and a test kit (supplies for 30 tests).

Rapid POC systems will be shipped to each health center's administrative address on record in the HRSA Electronic Handbooks (EHB). Health Centers are expected to distribute the systems (analyzers and test kits) to permit their use at the range of in scope service site locations, to the extent applicable.

Health Center Information

Please select the State/Territory in which your health center is located. [Select an answer choice from the list]

Please select your health center name and associated Grant Number. [Select an answer choice from the list]

Please confirm your health center's administrative address for shipment: _____

Please enter a point of contact for follow-up questions:

Health center contact name: _____

Health center contact telephone number: _____

Health center contact email: _____

Questions

Is your organization interested in receiving rapid point-of-care testing systems (i.e., analyzers and tests)?

☐ Yes

☐ No. Please provide reason why not _____

Note: HRSA notes that a health center or look-alike may not have an opportunity to receive rapid POC systems under this program if it indicates that it is not interested in receiving such systems. If additional rapid POC systems become available for future distributions, HRSA will communicate such availability.

Analyzers:

How many analyzers do you need for your health center's service sites? _____

If "0", explain why (i.e., already have analyzer(s)).

Note: HRSA may need to adjust allocation of analyzers based on the total available supply.

Test Kits:

Test kits include: tests, sample collection swabs, reagent, tube tray, positive (+) and negative (-) control swabs.

Test kits will be shipped by cases (1 case = 12 test kits = 360 tests). Health centers are encouraged to request test supplies to last through end of summer 2021. NOTE: Each shipment would supply product with 45+ days of shelf-life.

How many cases of test kits (1 case = 12 test kits = 360 tests) do you need from April through August?

If "0" provide reason why (i.e., already have test kits).

Note: HRSA may need to adjust allocation of test kits based on the total available supply.

Agreement Requirements and Certification

By checking the box below, the individual completing this form certifies that they have the authorization to provide this information on behalf of the health center. Technical questions about the equipment and supplies must be directed to the vendor.
